Forkpipe: Website Build Brief

For the AI agent building forkpipe.com. Prepared October 25, 2026. Read the whole document before writing any code or copy.

0. How to work

1. Read everything, including the rules in Section 2.
2. Send the founder **one message** with the questions from Section 9. Number them and give each a recommended default, so the founder can reply "defaults" for any of them.
3. While you wait, build only what does not depend on the answers: layout, design system, logo, the fork/pipe diagram, page skeletons.
4. Build the full site.
5. Deliver the files, a README, `BUILD_LOG.md` and the claims audit described in Section 11.

1. What you are building

Forkpipe is a brand-new, founder-led GTM engineering studio. At launch it is one person. It builds signal-based outbound and event follow-up systems for B2B tech companies: developer tools, infrastructure, cloud and SaaS.

The site has three jobs:

- A stranger should understand what Forkpipe does in 10 seconds and how it works in 60.
- A prospect who Googles the name after meeting the founder, or after a LinkedIn or email message, should find a site that looks credible and honest.
- It should lead to one action: booking a short call.

The name is the idea, so the site must show it. In Unix, `fork()` splits one process into two so each can go its own way, and `pipe()` connects one process to the next so output flows through. For Forkpipe:

- **Fork** means splitting one market into segments and message angles, and testing them side by side.
- **Pipe** means one connected path that carries the right account, the right person and the right message through to a real conversation.

This metaphor must appear in the hero, a dedicated section, the logo and the diagram, written so that someone who has never used a terminal still gets it.

Hosting must cost nothing (Cloudflare Pages or GitHub Pages). The founder has almost no budget.

2. The no-fabrication rules (strict, non-negotiable)

Forkpipe has no clients yet, no case studies and no results. The agency sites used as reference are full of proof, and Forkpipe has none to show. We will not fake any. One invented number, once caught, makes a prospect distrust everything else, so honesty is the brand.

R1. Never invent a fact. The only usable facts are the ones in Section 3 and anything the founder tells you in the conversation. Everything else is unknown.

R2. When a fact is missing, ask. Do not guess, do not write something plausible, do not copy a competitor's version. Put `[ASK FOUNDER: <question>]` in the source, add it to `BUILD_LOG.md`, and raise it in your next message to the founder.

R3. Forbidden content. Do not create any of the following unless the founder supplies real, verifiable material:

- Client names, logos, "trusted by" or "as seen in" strips
- Testimonials, reviews, star ratings, quotes from anyone
- Case studies, results, metrics, percentages, revenue or pipeline figures, counts of emails, leads, meetings or campaigns
- Years of experience, team size, team members other than the founder, team photos
- Awards, certifications, partner or "certified agency" badges for any vendor or platform
- Prices, guarantees, free offers, money-back terms
- An office address, phone number or any contact detail not provided
- Stock photos of people, fake headshots, AI-generated faces

R4. Competitor sites are structural inspiration only. Never copy their words, numbers, claims, testimonials, logos, screenshots or exact layouts. Never name them on the site. All copy is original.

R5. No fake interface. No invented dashboards, notifications, chat bubbles, live tickers, counters, countdown timers or scarcity messages ("only 3 spots left").

R6. Illustrations must say what they are. A sample document or diagram is allowed only if it is labeled "Template" or "Illustrative example", uses obviously fictional names such as "Example Co", and shows no outcome numbers.

R7. Method claims only if confirmed. Describe only what Forkpipe will really do, and only as the founder confirmed it (Section 9). Never promise outcomes.

R8. Third-party marks. Do not use anyone's logo or imply a partnership. On the event page, include the AWS disclaimer in Section 7. Name a tool (for example Clay, LinkedIn) only if the founder approves it.

R9. Proof section is hidden by default. Build the component, but render nothing until the founder supplies real numbers. When they do, each figure must show its source, date range and sample size, and say whose campaign it was. Results from the founder's other business (HookX) are never presented as Forkpipe results.

R10. Legal pages are drafts. Write plain-language Privacy and Terms pages, mark them "Draft, not legal advice, founder to review", and ask for jurisdiction and contact details first. Do not copy any other site's text.

R11. Flag, don't comply silently. If the founder asks for a line that looks untrue, inflated or unverifiable, say so and propose an honest version.

R12. Honest voice about being new. Say plainly that Forkpipe is new and founder-led, and turn that into a real advantage (direct access, small pilot, transparency). Never imply a bigger operation. "We" is fine as a brand voice, but never write "our team of experts" or anything that suggests staff.

Banned words and phrases (fail the QA check if any appear): guaranteed, #1, best, leading, top-rated, proven, 10x, trusted by, as seen in, our clients, our customers, case study, award-winning, certified, limited spots, only * left. Also avoid AI-sounding filler: unlock, supercharge, game-changing, revolutionize, seamless, cutting-edge, elevate, leverage (as a verb), delve. **Do not use em dashes anywhere in the copy.**

3. Approved facts (the only things you may state)

- **Brand:** Forkpipe. Domain: forkpipe.com. New and founder-led; one person at launch.
- **Founder:** Banshaj (ask for the full display name and whether to show it). Based in Nepal (ask whether to show it).

- **Credentials, wording to be confirmed:** GitHub Campus Expert. Builds and organizes tech communities and events across Nepal's college tech ecosystem. Mentors other GitHub Campus Experts. Recipient of the AWS All Builders Welcome Grant.
- **Other business:** the founder also runs HookX, an agency building retention revenue systems (email and SMS) for pet ecommerce brands. Mention it only if the founder says yes (Q5), and never attach results to it.
- **What Forkpipe offers:** signal-based outbound and event follow-up systems for B2B tech companies (developer tools, infrastructure, cloud, SaaS). The pieces: account research driven by signals, verified lead lists, email and LinkedIn outreach with human-reviewed messages, reply handling and reporting, and event follow-up systems.
- **Intended engagement shape, pending confirmation:** intro call, plan, build, small pilot, weekly updates, then scale or stop.
- **The fork/pipe name story:** approved for use.
- **Event:** the founder is attending AWS re:Invent 2026 and wants to meet people there. Dates and booking details are to be confirmed (Q7).

Not facts yet: any client, result, number, partner status, team size, years of experience, tool expertise, price, guarantee or award.

4. Positioning, voice and tone

Audience: heads of growth, demand gen, sales, RevOps, and founders at B2B tech companies with a sales-led or hybrid motion.

Positioning line: *Signal-based outbound for B2B tech, built by an engineer.* (Short form: "Fork your market. Pipe the right buyers into conversations.")

Voice:

- Plain, specific, calm. Engineer to engineer, friendly, no hype.
- Short sentences. Concrete nouns. Say what actually happens.
- First person singular where the founder speaks (About page), "we" elsewhere.
- It should read like a person wrote it. No em dashes, no filler, no stacked buzzwords.
- Technical flavor in small doses: `fork()`, `pipe()` and monospace labels. Never so much that a non-engineer feels shut out.

5. Site map

Page	Path	Purpose
Home (long page with anchored sections)	`/`	Explain the offer, the method and the next step
About	`/about/`	Who the founder is, honestly
Event follow-up	`/event-follow-up/`	Landing page for the re:Invent conversations, evergreen afterwards
Privacy (draft)	`/privacy/`	Required
Terms (draft)	`/terms/`	Required
404	`/404.html`	Friendly dead end with a way home

No blog, no pricing page, no case study pages at launch. A single primary call to action everywhere: **Book a 20-minute call** (the length is to be confirmed).

6. Home page: structure and draft copy

All copy below is a draft in the right voice. Edit freely, but obey Section 2. Anything marked [ASK] needs the founder.

6.1 Navigation

Wordmark `forkpipe` (lowercase, monospace) with the logo mark. Links: How it works, What we build, Who it's for, About, FAQ. Button: **Book a call**. Sticky on scroll, keyboard accessible, collapses to a menu on mobile.

6.2 Hero

- Eyebrow (monospace): `GTM engineering for B2B tech`
- H1: **Fork your market. Pipe the right buyers into conversations.**
- Sub: Forkpipe builds signal-based outbound for B2B tech companies. We find the accounts with a reason to talk right now, write messages a real person has checked, and run email and LinkedIn together, so interested replies land with your team.
- Buttons: **Book a 20-minute call** and a text link **See how it works**

- Small line under the buttons: *Founder-led and small on purpose. You work directly with the person building your system.*
- Visual: the animated fork/pipe diagram (Section 10).

6.3 The problem

H2: **Outbound usually breaks in the same few places.**

Four short cards. No statistics, only plain observations.

1. **Research eats the week.** Reps end up hunting for the right person instead of talking to them.
2. **The tools don't talk to each other.** Data lives in one place, sequences in another, replies in a third, and someone glues it together by hand.
3. **Blasts burn domains.** One template sent to a huge list is a fast way to wreck your sender reputation.
4. **Good timing gets missed.** A funding round, a new hire or an open sales role is a reason to reach out this week, not next quarter.

6.4 What the name means

H2: **Why "Forkpipe"?**

Text: In Unix, `fork()` splits one process into two so each can go its own way. `pipe()` connects one process to the next so the output flows through. That is how we think about outbound.

Four-step diagram, each step with a monospace label and one line:

1. `signal`: Something changes at a company you care about.
2. `fork()`: We split your market into segments and write a few different angles for each. They run side by side, so your market shows us what lands.
3. `pipe()`: Each account moves down one connected path: a verified contact, a hand-checked message, email and LinkedIn in sequence, replies routed to you.
4. `reply`: A real person on your team picks up a real conversation.

Closing line: *It is also how we build: small parts that each do one job and connect cleanly.*

6.5 What we build

H2: **What we build**

Cards:

- **Signal-based account research.** Hiring, funding, launches, leadership changes, events. We watch the signals that matter for your offer and turn them into a ranked list of accounts.
- **Verified lead lists.** The right role at the right company, with the email checked before anything is sent.
- **Email and LinkedIn, together.** Messages written for each account and reviewed by a human. LinkedIn outreach stays manual and paced, so nobody's account is put at risk. [ASK: confirm this policy]
- **Reply handling and reporting.** Interested replies routed to the right person quickly, plus a plain-English update on what we tried and what we saw.
- **Event follow-up systems.** Turn badge scans and booth conversations into organized, prioritized follow-up that actually gets sent. Link to `/event-follow-up/`.

6.6 How an engagement runs

H2: **How an engagement runs**

Six steps, numbered, with a one-line note under each.

1. **Intro call (20 minutes).** We listen: your offer, your buyers, what has and hasn't worked.
2. **Plan.** A one-page document covering your ICP, offer and signals. You approve it before we build.
3. **Build.** Sending setup and warmup, account list, verified contacts, message drafts. Warmup takes time and can't be rushed, so this is the slowest step.
4. **Pilot launch.** Small volume. You approve every message.
5. **Weekly update.** What we sent, what came back, what we are changing.
6. **Scale or stop.** After the pilot, we decide together with real numbers in front of us.

Note under the list: *Timelines depend on warmup and on how quickly approvals come back. We give you a date range on the call, not a promise.* [ASK: confirm the method and the timeline wording]

6.7 Why we start small

H2: **We're new. That's why we start small.**

Text: Forkpipe is a young studio. We won't pretend otherwise, and we won't show you someone else's results as if they were ours. Instead we offer a short pilot with a clear scope, so you can judge the work on your own market before committing to anything bigger. You deal with the founder directly, and you can see how every part works. [ASK: confirm the pilot is paid, and its terms]

6.8 Who it's for

H2: **Who we're a good fit for**

Two columns.

A good fit:

- B2B tech companies: developer tools, infrastructure, cloud, SaaS
- A real sales motion, and someone who can take the meetings
- An offer that some buyers already pay for
- Patience for a few weeks of setup

Probably not a fit:

- Products still looking for their first customers
- Teams with nobody to answer interested replies
- Anyone who needs results by Friday
- Commission-only arrangements
- Pure self-serve products with no sales conversations

6.9 Founder card

H2: **Who you'll work with**

Short card with the founder's photo (only a real photo provided by the founder; otherwise a monogram). Text: *Hi, I'm [ASK: name]. I'm a GitHub Campus Expert who builds tech communities and events across Nepal's college ecosystem, and I mentor other Campus Experts. I started Forkpipe because [ASK FOUNDER: one honest sentence on why].* Link to `/about/`.

6.10 FAQ

H2: **Straight answers.** Accessible accordion.

- **Do you guarantee meetings or revenue?** No. Nobody can honestly guarantee that, because results depend on your market, your offer and how fast replies get answered. What we control is how carefully the list is built, how the messages are written and checked, how safely we send, and how openly we report.
- **How is Forkpipe different from other agencies?** We're small, technical and founder-led. The person you talk to also builds the system. We're new, so we start with a short pilot instead of a long contract.
- **How long until we see results?** Setup comes first, and email warmup alone takes a couple of weeks. After sending starts, replies can show up within days, but a clear read on what works usually takes a month or two. We'll give you a realistic range once we've heard about your market. [ASK: confirm]
- **How do you protect our domain?** We send from separate lookalike domains, never your main one, warm up inboxes before sending, and keep volume modest. [ASK: confirm the practices to publish]
- **Do you use AI?** Yes, for research and first drafts. A human reads and edits everything that goes out. [ASK: confirm]
- **Do you automate LinkedIn?** No. LinkedIn restricts automated activity, and we won't put your account at risk. We run LinkedIn outreach by hand, at a safe pace. [ASK: confirm]
- **What do you need from us?** A conversation about your offer and buyers, access to the tools we'll connect to, quick approval on messages, and someone to answer interested replies within a day.
- **What does it cost?** It depends on scope, so we quote after a call. [ASK: pricing visibility]
- **Who owns the data, domains and tools?** [ASK FOUNDER]

6.11 Final call to action

H2: **Want to see what this looks like for your market?**

Text: Book a short call. We'll talk about who you sell to, which signals matter, and whether Forkpipe is a fit. If it isn't, we'll say so.

Buttons: **Book a 20-minute call** and **Email us** (the email address is [ASK]).

6.12 Footer

Wordmark, one-line description (*Signal-based outbound for B2B tech.*), links (Home sections, About, Event follow-up, Privacy, Terms), contact email, the founder's LinkedIn link [ASK], location only if approved, and `© {current year} Forkpipe`.

7. Event follow-up page (`/event-follow-up/`)

Built for the people the founder meets at AWS re:Invent, and useful afterwards.

- **Banner (show only after the founder confirms dates):** *I'll be at AWS re:Invent [ASK: dates]. Want to meet? [booking link]*
- **H1: Don't let your badge scans go cold.**
- **Sub:** A week at a conference can fill your calendar with conversations. Follow-up is where it often goes wrong: the list arrives late, everyone gets the same email, and the best conversations get buried. Forkpipe builds the system that sorts, prioritizes and drafts the follow-up while people still remember you.
- **Section "Before, during, after":**
  - *Before:* a target account list, and meeting requests to the right people.
  - *During:* a simple way to capture notes on each conversation.
  - *After:* enrich the contacts, score them, route them, and draft personal follow-ups for a human to approve.
- **Section "What we need from you":** the list of contacts or scans, a sentence on what you offer, and someone to approve the drafts.
- **CTA:** Book a 20-minute call.
- **Disclaimer in the footer of this page, required:** *Forkpipe is an independent company. It is not affiliated with, sponsored by or endorsed by Amazon Web Services. AWS and re:Invent are trademarks of Amazon.com, Inc. or its affiliates.*
- Do not claim that a demo or past event exists. If the founder later builds a demo, add it and label it clearly.

8. About page (`/about/`)

Only approved facts. Suggested structure:

1. **Heading:** Who's behind Forkpipe.

2. **Short intro in first person,** using only the facts in Section 3. Ask for the personal story: why GTM, why this niche, what the founder cares about.
3. **Community work (approved facts only):** GitHub Campus Expert, builds and organizes tech communities and events across Nepal's college ecosystem, mentors other Campus Experts, AWS All Builders Welcome Grant recipient. Do not imply AWS endorses Forkpipe.
4. **HookX (only if approved):** one sentence describing what it is, with no results attached.
5. **How I work:** three short honest principles drawn from the method in Section 6: small pilots, human-reviewed messages, plain-English reporting.
6. **CTA:** Book a call.

Use a real photo supplied by the founder. No stock images.

9. Questions to ask the founder (one message, with defaults)

1. Full display name for the site, and a photo? *Default: first name and a monogram until a photo is sent.*
2. Show your location? *Default: "Remote-first, based in Nepal."*
3. Contact email (the forkpipe.com address) and LinkedIn URL?
4. Booking link? *Default: a free scheduling tool such as Cal.com, or email-only until one exists.*
5. Mention HookX? *Default: yes, one factual line on the About page, no results.*
6. Show pricing? *Default: no prices. "Quoted after a call."*
7. Pilot terms, and the re:Invent dates and how people can book a meeting there? *Default: describe a short pilot without terms; hide the banner until dates are confirmed.*
8. Mention the AWS All Builders Welcome Grant? *Default: yes, About page only, with the no-endorsement note.*
9. Which tools may be named on the site? *Default: none.*
10. Confirm the method wording, the timeline wording and the deliverability practices in Sections 6.5 to 6.10. *Default: publish only after the founder edits and approves them.*
11. Any free offer (for example a one-page signal map)? *Default: none, and never promise one the founder cannot deliver in a stated time.*
12. Analytics? *Default: none.*
13. Logo and color preferences? *Default: the agent's proposal in Section 10.*

14. Any real proof the founder is allowed to share? *Default: none. The proof section stays hidden.*
15. Privacy and Terms: jurisdiction, and what data the site collects (probably none).

10. Design and technical direction

What to learn from the reference sites (adapt, never copy):

- *One reference* leads with a single sharp promise and two buttons above the fold, explains its method openly, and includes an honest "who this is not for" section. Take the clarity and the honesty.
- *Another* frames the problem around what buyers already feel and walks through a numbered end-to-end process, with a preview of a deliverable. Take the problem-then-process flow. For the deliverable preview, use a **labeled template** of Forkpipe's one-page plan document, never a fake report.
- *The third* uses an offer-led hero, a short "how to get started" sequence that lowers the risk of saying yes, and simple service cards. Take the low-friction start and the repeated single CTA.
- **Skip everything built on proof Forkpipe does not have:** logo walls, testimonials, dashboards, pipeline totals, "#1" claims, free-campaign promises, team photos.

Visual style: an engineer's studio, not a template agency. Calm, precise, a little technical.

- Dark theme by default with a full light theme through `prefers-color-scheme`, both defined as CSS variables on `:root`. Suggested tokens: dark background `#0B0F14`, surface `#121820`, text `#E6EDF3`, muted text `#8B98A5`, accent teal `#3DD6B0`, secondary amber `#F5A524` for the fork highlights. Light: background `#FAFBFC`, surface `#FFFFFF`, text `#0B0F14`, accent `#0F9D82`. Check contrast against WCAG AA.
- Type: Inter for text and JetBrains Mono for labels and code-like accents, loaded from Google Fonts with real fallback stacks and `font-display: swap`.
- Layout: max width about 1120px, generous spacing, 1px borders on cards, no heavy gradients, no stock photography, no illustrations of people.
- **Logo:** a lowercase monospace wordmark `forkpipe` plus a simple SVG mark: one line that splits into branches, with one branch continuing into a pipe. Create it as inline SVG.
- **Hero and Section 6.4 diagram:** an inline SVG where a single stream forks into three branches, two fade, and the winning one flows through a pipe to a small "reply" node. Animate gently with CSS. Respect `prefers-reduced-motion` and show a static

version.

- Mobile first. Tap targets at least 44px. Visible keyboard focus.

Technical requirements:

- Static site in plain HTML, CSS and a little vanilla JavaScript. No framework, no build step, no tracking, no cookies, no third-party scripts except Google Fonts.
- Hosting: Cloudflare Pages (free), deployed from a GitHub repository, custom domain `forkpipe.com`, `www` redirecting to the apex. Include a `_headers` file with sensible security headers (X-Content-Type-Options, Referrer-Policy, a restrictive Content-Security-Policy that allows only Google Fonts).
- No contact form. Use the booking link and a `mailto:` link, so there is no backend cost.
- SEO: unique title and meta description per page, canonical URLs, Open Graph and Twitter tags, `sitemap.xml`, `robots.txt`. Create the OG image as a simple wordmark-and-tagline graphic with no invented data. Add JSON-LD `Organization` containing only approved fields.
- Semantic HTML, a proper heading order, alt text, and WCAG AA accessibility. Aim for Lighthouse scores of 90 or higher.

11. Deliverables and QA

Deliver:

1. The complete site files in a repository structure ready for Cloudflare Pages.
2. `README.md`: local preview, deploy steps for Cloudflare Pages, how to edit copy and add proof later.
3. `BUILD_LOG.md`: every `[ASK FOUNDER]` item and its status (open or answered, with the founder's answer).
4. `scripts/check.sh`: fails if any `[ASK`, `TODO`, `lorem`, banned phrase from Section 2, or em dash is found in the production files.
5. **A claims audit:** a table listing every sentence on the site that states a fact about Forkpipe, the founder or the world, with its source (Section 3 or the founder's message). Remove any sentence that has no source.

Final QA checklist:

- [ ] No rule in Section 2 is violated
- [ ] `scripts/check.sh` passes

- [ ] The claims audit has no unsourced line
- [ ] The fork/pipe idea is visible in the hero, the diagram, the logo and the copy
- [ ] A stranger can say what Forkpipe does after 10 seconds on the home page
- [ ] The hidden proof section renders nothing while empty
- [ ] The AWS disclaimer is on the event page
- [ ] Both themes pass contrast checks, and the site works on a phone
- [ ] The founder has approved every method and policy statement
